Lowest Misclassification rate: 0.052631578947368474

Highest F1 Score: 0.96

of Epochs for SGD: 200

Comparison:

Misclassification Rate:

With an equal # of iterations for both versions of BGD, my implementation performed significantly better with a misclassification rate of 0.008771929824561403 compared to scikit's 0.03508771929824561. However, scikit's implementation for SGD performed slightly better at 0.052631578947368474 compared to my 0.06140350877192982.

F1 Score:

All Scores for F1 rate fall between the range of 0.9 to 1, with my implementation of BGD performing the best at 0.9870129870129869. While scikit's implementation of SGD performed better than my version. These results align with the conclusions drawn from the misclassification rates.

PR and ROC Curves:

There are no visible differences between scikit's and my implementation of BGD and SGD.
